PSEUDOMONAS: MOLECULAR BIOLOGY OF EMERGING ISSUES VOLUME 4 (HARDBACK)

Springer-Verlag New York Inc., United States, 2006. Hardback. Book Condition: New. Approx. 600p. ed.. 229 x 157 mm. Language: English . Brand New Book. Twenty years have gone by since Jack Sokatch first published his outstanding *The Biology of Pseudomonas* back in 1986. This was followed by two books published by the ASM that contained the presentations of the Pseudomonas meetings held in Chicago in 1989 and Trieste in 1991. The earlier volume of these two was edited by Simon Silver, Al Chakrabarty, Barbara Iglewski, and Sam Kaplan, and the later one by Enrica Galli, Simon Silver, and Bernard Witholt. The time was ripe for a series of books on Pseudomonas because of its importance in human and plant pathogenesis, biofilms, soil and rhizosphere colonization, etc. Efforts were devoted to produce the first three volumes of the series on the biology of Pseudomonas after a meeting with Kluwer staff members in August 2002 during the XI IUMS conference in Paris (France). In less than a year a group of outstanding scientists in the field, after devoting much of their valuable time, managed to complete their chapters for the three volumes of the series. To ensure the high standard of each chapter, renowned scientists participated in the reviewing process. The three books collected part of the explosion of new vital information on the genus Pseudomonas.
