

Proceedings of the Royal Society of Edinburgh Volume 25, PT. 1

By Royal Society of Edinburgh

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: .children and grandchildren reproduced in large numbers (hundreds), though, as mentioned above (p. 297), only a few of these survived. Sagartia troglodytes, in these aquaria at any rate, apparently takes three years to reach maturity. In the early part of 1904 the aquaria were somewhat neglected, the water was aerated less frequently and not changed for over three months, and the animals remained unfed for a longer period than usual. Probably as a result of these less favourable conditions only a few young, much fewer than usual, were produced, even by the younger specimens of Sayartia; these younger ones were abnormally thin and transparent, and were not extruded until early in April. The sixteen original specimens produced no offspring whatever in the spring of this year (1904). Specimens of Actinia mesembryanthemum living under identical conditions and in the same aquaria as the Sagartia were more fruitful...
